Council for Tobacco Research-USA, Inc.
900 Third Ave.
New York, NY 10022

Dear Sir or Madam,

I am in my first year of my postdoctoral studies in Dr. William Earnshaw's laboratory at the Johns Hopkins University. The pilot studies we have undertaken in the past few months have convinced me that there are opportunities in my sponsor's lab for developing exciting insights into the processes of cell division. Accordingly, I am in the process of contacting organizations which may support young scientists interested in working on questions of basic and applied biology related to cell growth and cancer.

Does the Council for Tobacco Research consider supporting scientists at the postdoctoral level of training? If this is the case, I would be grateful if you would send me instructions on how I might apply for such support, along with any relevant materials.

Sincerely,

Alastair Mackay
